

# RawMVC Data Entry Feature Documentation

---

## Overview:

The objective of the project is to modify the rawMVC and add a data entry feature that lets the user add inputs and press the 'ENTER' key to add the data into the app.

The app contains:

- Model, View and Controller feature.
- Two Containers with a list and Summary feature

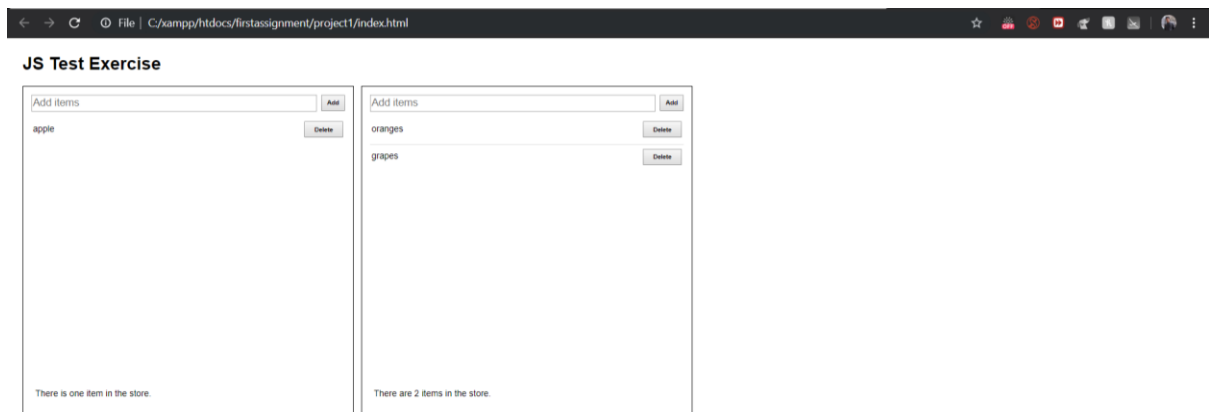

## Background:

All the rawMVC Html and Js files were provided and only the data entry feature was needed to be added.

The order in which I tackled the project was:

- Added an Event Listener.
- Found the KeyCode for 'ENTER' key.
- Triggering the Event with the KeyCode.

---

## Conclusion:

This Project gave me an idea about the Model, View, Controller Function and about adding event listeners and triggering events with functions.
